ADOBE ACROBAT PRO MARKING TOOL FEATURES

1. Mark electronic PDF assignments using structured annotations

The PDF marking tool extends out-of-the-box features in Adobe Acrobat to allow users to add marking annotations to any PDF document. A set of annotations have been created to cater for a variety of marking situations, this includes a typical tick-mark, a half-tick mark and a cross, among others.

2. Customise marking tools according to the requirements of individual assignments

The marking annotations are configurable according to your specific needs. For example, you can configure a tick-mark to me worth 2 points (or technically any number). This ability makes marking fast and efficient.

3. Mark documents while fully offline.

Since it runs as a plug-in within Adobe Acrobat, the marking tool is able to work in a fully offline environment.

4. Easily calculate and recalculate marking results

The tool stores marking values alongside the annotations and uses these to calculate the final score in a quick and easy process. Results are presented in a structured table that provides the learner a detailed overview of where they lost marks.

5. Add and tabulate feedback comments, making it easy for students to access improvement notes

The tool also allows custom comments to be attached to marks. These comments are visible directly on the document page, but are also combined into a comments table at the end of the document. This is useful for long assignments that may have a substantial amount of feedback.

6. Standardise bulk marking by using pre-configured marking rubrics

To enable bulk marking, the tool also provides Rubric-marking capability. A rubric is a structured document that provides guidance to a marker, showing possible options for each question along with default scores and comments. Such a rubric can easily be distributed to a team of markers to ensure marking is consistent.
